Education

Las Positas College — Livermore, CA
Associate of Science in Computer Science — *Anticipated B.S. Graduation: May 2030*
Coursework: C++, object-oriented programming, discrete math, Calculus I–II

Projects

C++ Search Engine | GitHub — Oct. 2026
C++17, CMake, SQLite, libcurl, multithreading

- Built a document-search engine with a linear-scan baseline, inverted index, versioned persistent indexes, and exact, fuzzy, and synonym-aware queries.
- Benchmarked on 5,950 Wikipedia articles (74.5 MB): worker-local indexing cut peak RSS 14.6% (1.04 GB to 892 MB) and parallel build time from 496 ms to 434 ms.
- Added PDF, web, and SQLite ingestion, a localhost browser UI, and GitHub Actions CI on Ubuntu and macOS.

Sonder | imsonder.com | GitHub — Aug. 2026 – Present
React Native, Expo, TypeScript, Supabase, PostgreSQL, Vercel

- Built and deployed a full-stack community app; designed the PostgreSQL schema around ownership periods so vehicle history transfers between owners without losing authorship.
- Integrated the NHTSA vPIC API into VIN onboarding to autofill year, make, model, engine, and trim; added authentication and serverless endpoints.
- Enforced access control with PostgreSQL row-level security, verified by automated role-based permission tests.

Rocket Landing RL | Live demo | GitHub — Oct. 2026
Python, PyTorch, NumPy, Gymnasium, GitHub Actions

- Built a 2D landing simulator and a from-scratch PyTorch PPO agent; with a fuel-aware reward, 19 of 20 seeds land 90%+ of 500 unseen starts (mean 98.8%), against 12 of 20 (70.5%) before.
- Diagnosed unstable training: fixed observation scaling lifted success from 27.6% to 95.0% (six seeds); traced collapses to fuel exhaustion and fixed them with a fuel-aware reward.
- Wrote a held-out evaluation that asserts test seeds never overlap training and keeps failed seeds in the results; 120+ tests, GitHub Actions CI, and a replay viewer on GitHub Pages.

Experience

IT Support Technician — Feb. 2026 – Present
Five Star Networking — *Livermore, CA*

- Supported high-profile client assignments at Meta corporate offices, resolving on-site hardware, network, and infrastructure issues.
- Support 100+ end users across client environments with a 95%+ resolution rate on hardware and software issues.
- Install, configure, and maintain Windows and macOS systems; troubleshoot network, printer, and VPN issues and document tickets.
- Manage Active Directory accounts and access permissions across client environments.

Technical Skills

Languages: C++, Python, Java, TypeScript, JavaScript, SQL (PostgreSQL)
Concepts: Data structures, algorithms, concurrency, data modeling, REST APIs, automated testing, access control, reinforcement learning, experiment design
Technologies: PyTorch, NumPy, Gymnasium, CMake, SQLite, libcurl, React Native, Expo, Supabase, PostgreSQL, Git, GitHub, GitHub Actions, Vercel
