Seeking a Summer 2027 software engineering internship

Education

Las Positas College — Livermore, CA
A.S. in Computer Science (in progress); transfer toward a B.S. — *Expected B.S.: May 2030*

Coursework: C++, object-oriented programming, discrete math, Calculus I–II

Projects

Rocket Landing RL | Live demo | GitHub — Oct. 2026
Python, PyTorch, NumPy, Gymnasium, GitHub Actions

- Trained a from-scratch PyTorch PPO agent that lands **98.8%** of 500 unseen starts (mean of 20 seeds; 19 of 20 above 90%), up from 70.5% with a fuel-aware reward.
- Fixed unstable training: observation scaling lifted success from 27.6% to 95.0% (six seeds); traced late-training collapses to fuel exhaustion.
- Built the 2D simulator, a leak-proof held-out evaluation that reports failed seeds too, 120+ tests with CI, and a live replay viewer.

C++ Search Engine | GitHub — Oct. 2026
C++17, CMake, SQLite, libcurl, multithreading

- Built a document-search engine with an inverted index, versioned persistent indexes, and exact, fuzzy, and synonym-aware queries, benchmarked against a linear-scan baseline.
- Benchmarked on 5,950 Wikipedia articles (74.5 MB): worker-local indexing cut peak RSS 14.6% (1.04 GB to 892 MB) and parallel build time from 496 ms to 434 ms.
- Added PDF, web, and SQLite ingestion, a localhost browser UI, and GitHub Actions CI on Ubuntu and macOS.

Sonder | imsonder.com | GitHub — Aug. 2026 – Present (live)
React Native, Expo, TypeScript, Supabase, PostgreSQL, Vercel

- Built and deployed a full-stack community app; designed the PostgreSQL schema around ownership periods so vehicle history transfers between owners without losing authorship.
- Integrated the NHTSA vPIC API into VIN onboarding to autofill year, make, model, engine, and trim; added authentication and serverless endpoints.
- Enforced access control with 70+ row-level security policies across 21 tables, verified by 41 automated permission checks that run after every migration.

Experience

IT Support Technician — Feb. 2026 – Present
Five Star Networking — *Livermore, CA*

- Resolve 95%+ of hardware and software issues for 100+ end users across client environments.
- Handle on-site hardware, network, and infrastructure issues for client assignments at Meta corporate offices.
- Install, configure, and maintain Windows and macOS systems; troubleshoot network, printer, and VPN issues and document tickets.
- Manage Active Directory accounts and access permissions across client environments.

Technical Skills

Languages: C++, Python, Java, TypeScript, JavaScript, SQL (PostgreSQL)
Concepts: Data structures, algorithms, concurrency, data modeling, REST APIs, automated testing, access control, reinforcement learning, experiment design
Technologies: PyTorch, NumPy, Gymnasium, CMake, SQLite, libcurl, React Native, Expo, Supabase, PostgreSQL, Git, GitHub, GitHub Actions, Vercel
