Education

Las Positas College — Livermore, CA
Associate of Science in Computer Science — *Anticipated B.S. Graduation: May 2030*
Coursework: C++, object-oriented programming, discrete math, Calculus I–II — *Major GPA: 3.35/4.0*

Projects

C++ Search Engine | GitHub — Oct. 2026
C++17, CMake, SQLite, libcurl, multithreading

- Built a document-search engine with a linear-scan baseline, inverted index, versioned persistent indexes, and exact, fuzzy, and synonym-aware queries.
- Benchmarked 5,950 English Wikipedia articles (74.5 MB): optimized worker-local indexing reduced peak RSS 14.6% from 1.04 GB to 892 MB, while parallel build improved from 496 ms to 434 ms and indexed-query p95 measured 0.026 ms.
- Added PDF, web, and SQLite ingestion, a localhost browser UI, GitHub Actions CI on Ubuntu/macOS, and multi-size benchmark reports with mean/median timings.

Sonder | imsonder.com | GitHub — Aug. 2026 – Present
React Native, Expo, TypeScript, Supabase, PostgreSQL, Vercel

- Built and deployed a full-stack community application; designed the PostgreSQL schema around ownership periods so vehicle history transfers between owners while preserving authorship and access boundaries.
- Integrated the NHTSA vPIC REST API into VIN onboarding to autofill year, make, model, engine, and trim with timeout handling; added authentication and serverless endpoints for public pages and email unsubscribe.
- Enforced access control with PostgreSQL row-level security and automated tests for role-based read/write permissions.

Rocket Landing RL | Live demo | GitHub — Oct. 2026
Python, PyTorch, NumPy, Gymnasium, GitHub Actions

- Built a 2D landing simulator and a from-scratch PyTorch PPO agent; with a fuel-aware reward, 19 of 20 seeds land 90%+ of 500 unseen starts (mean 98.8%), against 12 of 20 (70.5%) before.
- Diagnosed unstable training: fixed observation scaling lifted success from 27.6% to 95.0% (six seeds); traced collapses to fuel exhaustion and fixed them with a fuel-aware reward.
- Wrote a held-out evaluation that asserts test seeds never overlap training and keeps failed seeds in the results; 120+ tests, GitHub Actions CI, and a replay viewer on GitHub Pages.

Experience

IT Support Technician — Feb. 2026 – Present
Five Star Networking — *Livermore, CA*

- Selected for high-profile client assignments, providing on-site hardware, network, and infrastructure support at Meta corporate offices.
- Provide technical support for 100+ end users across client environments, resolving hardware and software issues with a 95%+ resolution rate.
- Install, configure, and maintain Windows and macOS systems; troubleshoot network, printer, and VPN issues while documenting tickets through resolution.
- Manage Active Directory accounts and access permissions across client environments.

Technical Skills

Languages: C++, Python, Java, TypeScript, JavaScript, SQL (PostgreSQL)
Concepts: Data structures, algorithms, concurrency, object-oriented programming, data modeling, REST APIs, automated testing, access control, reinforcement learning, experiment design
Technologies: PyTorch, NumPy, Gymnasium, CMake, SQLite, libcurl, React Native, Expo, Supabase, PostgreSQL, Git, GitHub, GitHub Actions, Vercel
